

1. Two children are born in the same hospital—in the same hour, day, and year. They have the same mother and father, but are not twins. **(the children are two of a set of triplets)**
2. A couple will build a square house. In each wall they'll have a window and each window will face north. **(the house is at the south pole)**
3. An ordinary American citizen, with a clean police record but no passport, managed to visit over thirty foreign countries. He was welcomed in each country and left each one of his own accord. He did this in one day. **(He was a mail courier who delivered packages to the different foreign embassies in the United States. The land of an embassy belongs to the country of the embassy, not to the United States.)**
